

LPH Password Manager- Brief User Guide.

What the App Does

LPH allows you to save, access, and auto complete your passwords in a secure and safe way. It also allows you to see a recovery phrase, lock your vault, share passwords with other users and find out whether your accounts have been involved in a data breach.

Getting Started

Note : The .exe file is for the window users and there is a .dmg file for the mac users .

Downloaded and unzipped the zip file and opened it In the my browser file. The window defender may warn it as being unsafe but simply run anyway.

Account Setup

Sign Up:

You may use any email and create a good master password of a least 8 digits. Enter in your recovery phrase and store it securely as guided .

Sign In:

Your email and master password. Before you enter your vault, you have to sign in.

Recovery Phrase

When you are signing up you will be given a 12-word recovery phrase. Record it and keep it out of the way. The only means of recovering your account in case you forget about your master password is through it.

Vault & Password Management

Add a Password:

Tap Add Password, open the vault. Click on the site, enter user name, password and save.

View Passwords:

Open up your vault and pick any entry that you have saved. Tap Unhide to see the password.

Copy Password:

Click on the Copy button to copy the details to the clipboard.

Delete Password:

Tap Delete in an entry that has been saved to delete it .

Vault Locking & Security

Use case : To keep your password safe when you are sitting idle from others .

Lock Vault:

Touch the Lock button to secure your vault. To unlock, you will be required to key in your master password once again.

Sign Out:

Sign out to close your session.

Security Check:

The extension has the ability to determine whether any email in your vault has been featured in known breaches of data. This can be used via “check account security “ button and enter a valid email address only otherwise it wont work .

Password Sharing

You can share your passwords with another LPH user:

Type the email address of the recipient, select a saved password and forward it. It can only be deciphered by the recipient.

You can access this feature using the share button .

Troubleshooting

Once you have entered the password which you can not access sometimes lock the vault the way out is just to minimize the screen and get it open again.

If sign-in fails:

- Review your mail and your password.
- The recovery phrase should be used when necessary.

For any queries, please see the video demo of the password manager :
